To Whom It May Concern:

      I'm writing to apply for the position of Software Engineer - Summer Intern at QRC Technologies, as it was listed on the University of Central Florida's Handshake career board. The possibility of working with your team to help engineer new software defined radio products is very exciting. I am currently pursuing a bachelor's degree in Computer Science from University of Central Florida. I also possess some intermediate familiarity with software defined radios. I believe my educational background and personal experiences fully qualify me for this position.

      I have graduated from Daytona State College with an associates of art's degree and a 3.95 GPA. I am currently pursuing a bachelor's degree in Computer Science from University of Central Florida. I have a strong background in programming and have taken multiple courses that involved designing and engineering software. In my freetime, I am currently studying and improving my C++ skills.

      I have used software defined radios in the past, and have always found them intriguing. In the past, I considered taking the technician exam to become a licensed ham radio operator, but I never found the time. As for my previous job experience, I was a dishwasher at a high volume restaurant. This job required me to communicate effectively with a large team and be very efficient in my own actions.

      I have attached my resume which further expands upon my background and experiences. I hope to further discuss with you about my qualifications for this position at your convenience. Please do not hesitate to email me at no754657@ucf.edu or leave me a message at 386-846-6833

      Sincerely,

      Noah Fordan
